Mini Project 2: Microservices Application

Composition, deployment, discovery, and orchestration

Tasks

1. Extend the students information system by adding new services that process:
   - teachers' data
   - exams and exam dates

2. Enable the clients of the application to see
   - list of students who have passed their exam on System Integration, together with their grades
   - number of students who haven't completed the Mini Project 2.

3. Deploy and orchestrate your microservices application in appropriate environment, such as the Netflix family of deployment services.

This is a graded Peergrade group programming assignment, which brings 15 study points and includes a peer review.

The size of the groups for this assignment is limited to 3 students.
